ABSTRACT:

PURPOSE: To transfer data efficiently without deteriorating a buffer efficiency.

CONSTITUTION: A series of data from a data transmission computer 9 are transferred to a transmission buffer 6 by processing quantity while being stored in a reception buffer 5 and sent sequentially to data reception computer 10. In order to implement the transfer efficiently, a buffer management means 2 and a data management means 3 control the transfer while referencing a control table 7. Thus, the computer makes transmission in matching with the data transmission capability.
